

The Clinical Trial Dilemma as a Polya's Urn Simulation

Mitja Seibold
R+Shiny
Alexander Savi

User Perspective

- You are a doctor and have 2 (or more) options to treat your patients
- BUT you don't know which is the best option
- AND you want to make sure that your patients get the best treatment possible

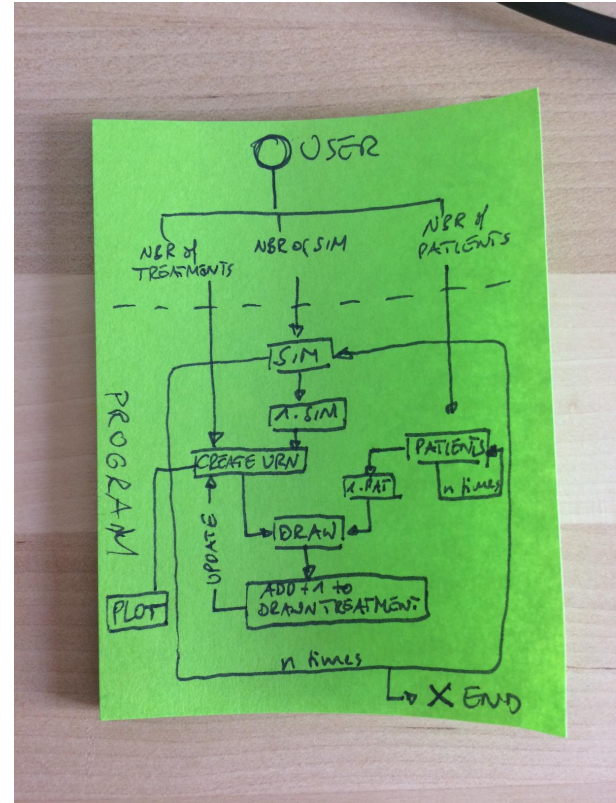

Software Perspective

```
Number of Treatments
Number of Patients      # Trials per simulation
Number of Simulations
```

```
FOR 1 -> Number of Simulations
  initiate Treatments    # create Urn
  FOR 1 -> Number of Patients
    draw Treatment (success for patient)
    add drawn Treatment +1 to urn
```

```
PLOT Distribution of Treatments
REPORT most successful Treatment
```

```
PLOT Distribution of Treatments for all Simulations
REPORT most successful Treatment for all Simulations
```

Possible Extensions

- Adding Weights/Probabilities
- Adding delayed relapse
- Adding delayed success

Superpowers

```
ui.R x server.R x func.R* x
Source on Save Run

PNS_Polya's Urn Simulation (the Clinical Trial Dilemma)

Polya's Urn Simulation in R + Shiny for PNS-Course@UvA

This is code for a Polya's Urn Simulation (https://en.wikipedia.org/wiki/P%C3%B3lya_urn_model) written in R+Shiny.
